

ABSTRACT OF THE DISCLOSURE

An efficient method for management of the information pertaining to the function and operation of vehicle features of the selected vehicles is disclosed. Individual digitized audio recording of spoken information
5 pertaining to the function and operation of individual features of the selected grouping of vehicles are made and stored as individual data files in a common vehicle information database. Information pertaining to the identification of a particular vehicle is input as a sorting index for sorting through and selecting out selected individual data files which, together, contain the
10 information pertaining to the function and operation of such selected features as corresponds to the selected vehicle. That information is then recorded onto an audio media storage device as audio tracks and provided to the customer for use with an audio media player.
